Wireless infrastructure is now the norm and adoption levels are still on the increase...

But ... wireless access points need to be connected to a stable wired network to perform IPv6 readiness on the up.

Shift from using wired access infrastructure to predominantly wireless.

Average 13% year-over-year increase in deployed wireless access points.

Density of wireless access points also increasing with Wi-Fi 6 leading the way.

Some 97.2% of discovered assets were IPv6 capable in 2019 – represents a steady increase over past 5 years. Was just 38.1% in 2015.

Google* reported that at end of 2019, approximately 30% of their customer base accessing their services via native IPv6 showing broad global adoption.

Organizations investing in next-generation strategic technologies to become more agile, automated and vendor independent.

13% 13% 97.2% year-on-year increase in software-defined infrastructure, with SD-WAN at 85% year-over-year average increase in deployed wireless access points.

01 increasing their ability and agility to manage the changes in line with the business strategy.

Optimizing costs ... less about saving money, but rather 'getting more for the same amount'

Solutions to unlock new revenue streams and/or optimize existing ones.

Key findings uncovered in the Report:

- Align business and IT strategy to realize the value of technology investments
- Organisations seeking a strategic solution to address network change.
- Over half (52%) of businesses will 'smart source' management of the enterprise network within next 18 months (represents a 33% increase).
- SD-WAN a high-growth market and a key cloud enabler.
- 41% have implemented or are in the process of implementing SD-WAN, with 43% actively considering.
- Increased adoption within the installed base of devices and infrastructure that NTT supports and/or manages.

Your network is the platform for your digital transformation.

A ubiquitous, flexible, robust and secure network lets you adapt easily to business change, while increasing the maturity of your support environment.

Uncover more data-driven insights and find out how NTT can help you to gauge and address associated risks.
