

Cloud Consulting Services

# Cloud Foundation Services

Achieve enterprise agility with our fast-track foundations to cloud

**Our Cloud Foundation Services** enables clients to build resilient cloud platforms on all major cloud service providers.

## Service overview

We support our clients by setting up the landing zone on public cloud, a critical step before migrating applications to the cloud. This ensures that all the correct tools and processes are in place as a solid foundation to build on.

## How we deliver

Our Cloud Foundation Services ensure that all the tools and processes are in place, and the cloud platform is ready and aligned with the cloud operating model, before starting the next step of migrating workloads to public cloud platforms.

Our services include the design and deployment of the multi-cloud setup, enabling operational agility, cloud infrastructure scalability, data and application vigilance and end-to-end security.

NTT deliver this service in four phases: Define, Design, Deliver and Transition, so that the landing zone is ready and operational. After the transition, we can proceed with the migration of the workloads for you, or we can hand the landing zone back to you again.

## The four phases of service delivery:

Let NTT build **the best foundation** for your first steps into public cloud together.

Business outcome	Benefits
<b>Ensuring efficient first steps into public cloud</b>	Landing zone designed and deployed by experts to enable the first approach to cloud.
<b>Smart, reliable and secure cloud implementation</b>	Design and build a secure cloud platform with proactive security controls.
<b>Enable technology agility</b>	Automated processes and landing zone leverage cloud adoption agility.
<b>Smooth adaptation with the current IT landscape</b>	Integrated cloud services with existing ITSM system and process.

## Key service features

- Creates a scalable hybrid cloud architecture using proven cloud standards, tenancy structure and cloud connectivity, such as BCP/DR design, etc.
- Establishes a cost-effective and agile cloud environment before any migration takes place.
- Enables clients to design and build a secure cloud platform with proactive security controls to increase security against cyberattacks and adhere to regulatory compliance requirements.
- Operation enablement for integrating cloud services with existing ITSM processes.
- Leverages proven cloud architecture blueprints based on best practices and certified by solution architects to deliver fast, efficient and consistent architectures on a global scale.
- Increase agility through DevOps and infrastructure as code automation integrated with container platforms.
- Work smarter by monitoring IaaS/PaaS services and applications hosted in cloud for availability, performance and cost.

### Why NTT Ltd.?

#### Global reach and local delivery

Identical delivery and methodology across regions to provide a truly consistent global service.

#### Full lifecycle service

Convert goals into outcomes thanks to a full ICT stack from data center and network to cloud and applications.

#### Strategic cloud partnerships

The highest level of partnership and accreditations with all major cloud vendors.

#### Comprehensive portfolio of ICT services

NTT provide consulting, technical and managed services to help you at every stage of your journey to the cloud.
