Slough 2 Data Center
Fully redundant reliable facilities to secure data

Site brochure
Home to the cloud

London, the capital and most populous city in the UK, features one of the largest economies in Europe. It is a leading business and financial services district, with more than half of the FTSE 100 headquartered in the city. London is a global connectivity hub, home to the London Internet Exchange (LINX), which is one of the world’s largest internet exchange points, with more than 850 members. The city boasts thousands of technology businesses and is a leading location for technological innovations such as FinTech.

The London data center market is one of the most active colocation ecosystems in the world with a strong networking, internet and cloud infrastructure presence. London is a strategic hub for data center services for both UK organizations as well as multinational companies, who from a physical and digital perspective, require reliable services to reach local customers even faster. As one of the leading data center providers in Europe, we continue to build on our sturdy foundation to successfully serve this vibrant data center market today and in the future.

Our Slough 2 Data Center is located in Slough, a town 20 miles west of central London in Berkshire. Slough is a prominent area for business in the UK due to its low rent costs but close proximity to London. The town’s transport links also make it an attractive business location as it boasts good motorway connections and is located approximately 7 miles from London Heathrow Airport. Outside of London, Slough has the largest amount of global companies’ UK headquarters, which include BlackBerry, McAfee, Burger King DHL, Computer Associates and O2. Slough is also the second largest data center cluster, behind London and the inner M25 area, in the UK and the fifth largest in Europe with 156,000 sqm of data center raised floor space. Slough 2 Data Center is a 30-minute drive from Heathrow International Airport, and a 60-minute drive from central London.

As well as being connected to other NTT data centers, the facility is also connected to major carrier hubs in the Docklands which has been established as the UK’s internet hub and the backbone for the global internet network, which facilitates the majority of the London Internet Exchanges (LINXs). The data center offers highly available, scalable data center space, with options for high power density, carrier neutrality, access to the public providers, internet connectivity, and on-site support.

A solution for every requirement

With a total of 890 sqm IT space and a maximum of 1.8 MW, Slough 2 Data Center offers complete solutions for housing your IT and network systems in a secure, high availability environment. We provide you with the best possible physical and technical infrastructure supported by 2N UPS systems, 2N generator backup, as well as N+1 cooling systems. Slough 2 Data Center holds multiple certifications and is connected to major carrier hubs in Docklands. It’s a fiber-connected campus and fully integrated with other NTT data center facilities allowing clients to grow and has the optimal distance to the Hemel Hempstead data centers and the London 1 Data Center in Dagenham for backup and disaster recovery solutions. To validate hybrid cloud services and innovations faster and at lower cost, our Technology Experience Labs provide the perfect hosted ecosystem in a live data center environment.
Secure and flexible space built to your specifications

Your requirements are the most important aspect of our service offering. You choose, we deliver. Whether you select a building shell which you configure yourself, or we construct it according to your specifications, or even if you want to rent a single rack in our shared environment, we can accommodate your needs. We will also ensure the space is highly available through our years of engineering critical data centers while maintaining high levels of security to keep your infrastructure and data safe.

Data center space

- 890 sqm of IT space
- flexible colocation deployments: single rack colocation, cages, suites, turnkey build to suites, shell and core solutions
- ancillary spaces (offices, storages, and pre-installation rooms) available
- common areas such as meeting rooms, and catering area

Cooling

- primary cooling infrastructure, centrally managed and linked to BMS
- room air conditioning units
- regulated humidity
- 1.5 m clear false ceiling void for hot-air return to Air Handling Units (AHU)
- contained hot aisle or chimney rack design for high efficiency cooling up to 20 kW per rack

Power

- dual dedicated 11,000 V (HV) grid connections (2N)
- dedicated 2N redundant HV substations on-site
- minimum 2N (UPS) with battery back-up
- 2N back-up generators
- refuelling contracts to ensure timely replacement

Fire protection

- physical fire protection in hosting suites and in all plant areas
- fully addressable fire detection system with Very Early Smoke Detection Apparatus
- gas suppression systems to technical areas
- fire detection and suppression systems interconnected to central BMS
- manual fire extinguishers located throughout the facility

Security

- 24/7 on-site security
- 3.6 m SEAP certified security fence with electrified topper
- secure crash-rated vehicle trap access to loading area
- PAS68 certified anti ram-raid barriers throughout site perimeter
- blast proof and anti-intruder shielded external windows
- steel security doors
- external and internal IP CCTV system
- proximity cards to authorize access levels including man trap access
- biometric identification

Connectivity

- carrier-neutral
- carrier mix from global tier 1 supplier to regional supplier
- connectivity to the major carrier hubs in Docklands
- redundant Carrier-Meet-Me-Rooms
- redundant cabling infrastructure with diverse paths
- Pre-Cabling to support fast Cross Connect deployments
- high-performance internet access
- inter data center connectivity between NTT data centers for geo-redundant solutions
- Multi Service Interconnection Platform to connect our clients to major cloud service providers such as Amazon Web Services, Microsoft Azure, and Google Cloud Platform

*Enabling internet bandwidth, access to major cloud providers and connectivity between other NTT data centers
Additional services
• consulting, general and implementation planning for development projects
• client implementation
• installation services
• 24/7 Remote Hands services
• facility services
• audit support

Global data center network
• part of the NTT family of over 160 data centers around the world
• connectivity options to the global NTT network
• access and use of Technology Experience Labs with a worldwide partner network

Service Level Agreement
• 99.999% power uptime availability
• climate control conditions in line with ASHRAE guidelines
• connectivity availability
About the Global Data Centers division of NTT Ltd.

Global Data Centers is a division of NTT Ltd. and incorporates DPA, e-shelter, Gyrón, NetMagic, NTT Indonesia Nexcenter, RagingWire and other NTT Communications group data center divisions. Our combined global platform is one of the largest in the world, with over 160 data centers spanning more than 20 countries and regions including North America, Europe, Africa and APAC. As a neutral operator, we offer access to multiple cloud providers, a large variety of internet exchanges and telecommunication network providers including our own IPv6 compliant, tier 1 global IP network. Our clients benefit from tailored infrastructure and experience consistent best practices in design and operations across all of our highly reliable, scalable, and customizable data centers.

Locations in London

Technology Experience Lab

- **Technology spaces**: Globally available facilities in productive data centers of NTT that bring together more than 140 technology partners to enable prospects and clients to test and validate, but also innovate on the latest technologies.
- **Industry communities**: Today, information technologies are a key enabling to many organizations. Our industry communities help these organizations to identify relevant technology providers and connect with helpful contacts.
- **Start-ups and venture capital**: Many times, start-ups are major drivers when it comes to disrupting various industries. Our start-up unit brings together start-ups, corporates and venture capitalists to enable and accelerate innovation.
